Is your store the one the AI recommends?

How shoppers ask

Price and availability questions, answered from product pages, deal sites and Reddit.

Clear pricing pages win the citation.

Questions we track

Four questions from Arab markets

«أرخص مكان لشراء آيفون في الكويت»

“best online store in Saudi Arabia”

«توصيل بقالة في الدوحة»

“laptop deals in Egypt installment”

Written the way people type them, in Arabic and in English.

What gets a store named

Three things we fix

01 Product pages the AI can read: price, stock, delivery and instalments, in both languages.

02 Deal sites and Reddit: your offers where shoppers compare, and wrong prices corrected.

03 Every sale counted: server-side tracking so Google and Meta see the sales blockers hide.

A common question

Noon and Amazon get named. Can a store compete?

Yes, for specific questions: “cheapest iPhone in Kuwait” names the store with a clear price page and fast delivery.

See how the AI answers about your store.
